

Industrial Road Phase I & II

Florence, KY

Project Stats

Client:	Boone County Fiscal Court
Location:	Florence, KY
Year:	2011
Market:	Roadway Infrastructure
Project Size:	2.00 Lane Miles

Services Provided:

SURVEYING SERVICES

Boundary Surveys
 Construction Layout & Staking
 GPS Control Surveys
 Legal Descriptions
 Location Surveys
 Quantity-Volume Surveys
 Right-of-way Surveys & Drawings
 Topographic Surveys

CIVIL ENGINEERING SERVICES

Earth Retaining Structures
 Erosion Control Planning,
 Permitting & Inspection
 Grading & Earthwork Analysis
 Hydrologic & Hydraulic Analysis
 Storm Water Collection System
 Storm Water Control Facilities
 Storm Water Pollution
 Prevention Plans
 Waste Water Collection System
 Water Supply Infrastructure

TRANSPORTATION ENGINEERING SERVICES

Access Management Plans
 Intersection Design
 Maintenance of Traffic Plans
 Pedestrian-Bicycle Facility
 Design
 Roadway Design
 Sight Distance Studies
 Signal Warrant Analysis
 Signing & Striping Plans
 Street Rehabilitation
 Transportation Studies

LANDSCAPE ARCHITECTURE & PLANNING SERVICES

Site Planning

Boone County Fiscal Court turned to Bayer Becker for a design consulting solution for their complex, economically important, multimillion dollar project which consisted of widening 1.6 miles of roadway to a five lane section and included four signalized intersections and 34 driveway reconstructions. The roadway serves one of the largest industrial parks in the Interstate 75 corridor, making traffic with a large percentage of trucks a significant design consideration. In addition to the roadway widening, the project also included improving the existing roadway profile, an ADA compliant sidewalk/multi-use path, improved traffic capacity and access management, and additional traffic signalization at various intersections along the corridor.

Bayer Becker was responsible for all design and permitting aspects of the project and also provided project management. Our multi-discipline capabilities allowed us to be a single point of contact for the project and enable us to provide professional engineering design services including field surveying, roadway design, hydraulics and hydrology, right of way plans, retaining wall design, detention design, and maintenance of traffic planning. As the lead consultant, Bayer Becker selected, contracted with and coordinated the efforts of sub consultants responsible for the traffic engineering, environmental studies, geotechnical engineering, and right of way negotiations.

Bayer Becker's years of experience with complex projects proved crucial for the extensive coordination that was required throughout the design of this project. The numerous agencies involved included municipal, regulatory and utility agencies. Bayer Becker also worked closely with the property owners along the corridor to ensure adequate access was provided throughout construction and permanently realized with the completion of the project.

Overall, Bayer Becker's design transformed Industrial Road into a safe, comfortable, and aesthetically pleasing thoroughfare, not only for vehicular traffic, but for all modes of transportation.
