May 25, 2016

To whom it may concern:

Bayer Becker has provided quality design services to the Butler County Water & Sewer Department over the course of many years. These services have included the design of sanitary sewers and water mains for new mainline extensions and replacement projects.

Bayer Becker has demonstrated a keen attention to detail which is evident in the quality of their documents. In addition, their experienced engineers are able to maintain the project design schedule and offer value added consultation to our department.

In particular, Bayer Becker recently provided professional services for the extension of a 16" water main associated with the expansion of the County's 1082 system to accommodate growth near the Liberty Way/I-75 interchange. The project design was completed on a fast track, including permits obtained within a 2-month period, which allowed for the successful opening of the Liberty Center development.

Based on our experience with Bayer Becker, the Butler County Water & Sewer Department would recommend Bayer Becker as a design consultant for future water and sanitary infrastructure projects.

Sincerely,

BUTLER COUNTY WATER & SEWER DEPARTMENT

Martha Shelby, P.E.

Engineering and Construction Manager
